

Checkpoint

Features

- Extends Cockpit functionality with Graphical review application of all QED summary locations.
- Visualizes for all checked design parameters all the found locations in the design.
- Shows the parameters in different graphs. Going from an overall graph to a detailed graph per layer.
- Available parameters are based on the functionality available in Integr8tor.
- Runs on every windows-based client without any setup.
- Requires only a license to run.
- Is customizable.
